SKILLS

Automation and supervision
Siemens PLCs (Step 7), Ladder, CODESYS (LD / ST / SFC), GRAFCET, PCVue, HMI screen design

Electrical and electronics
wiring diagrams, cabinet wiring, pneumatics, Proteus (schematic and PCB), QElectroTech, bench testing

Embedded and robotics
Raspberry Pi Pico, PIC (MPLAB X), Arduino, CircuitPython, C, Python, Denavit–Hartenberg modelling, forward kinematics

Tools
Excel, Power Query, CORIM CMMS, Git, Unity, 3D printing

ELECTRICAL CERTIFICATIONS

French habilitations H0V, BR, BC, B2V

LANGUAGES

French (native), English (B2)

INTERESTS

Sailing (volunteer instructor training at Les Glénans)
Arduino and robotics side projects
Europe road trip
Game development in Unity

Adam Deruelle

Automation maintenance technician apprentice — heading for mechatronics engineering

PROFILE

Third-year BUT GEII (Electrical Engineering & Industrial Computing) work-study student in industrial maintenance, looking for an **engineering work-study program from September 2027** in robotics or mechatronics. At work, I run automation projects from analysis to commissioning. On the side, I am building Talos, a personal robotic assistant, step by step.

EXPERIENCE

Automation & Industrial Computing Maintenance Apprentice

Groupe Rocher (Yves Rocher France) · Aug. 2025 – Aug. 2027
La Gacilly, France · maintenance department, cosmetics production site

Revamping an electro-pneumatic cabinet with about 100 solenoid valves

- Five-step analysis of the existing system: field survey, traceability from solenoid valve to relay to PLC output, cross-check of wiring diagrams, P&ID and supervision
- Validated every mapping by forcing PLC outputs (Siemens Step 7, VAT tables) during a maintenance shutdown
- Sized the cabinet (Excel tool), chose 11 modules of 9 solenoid valves, cabling and hardware, handled suppliers
- Installed in 2 phases during maintenance shutdowns, working in pairs, with 3 test campaigns (valves, air tightness, PLC control): cabinet fully commissioned
- Delivered in-house for about €7,000 of hardware, where a contractor quoted €11,000 for only ten valves

Side projects: PCVue supervision screen mock-ups · digitalized shift handover with Excel then Power BI (shop-floor screens, 3-shift plant) · machine inventory update in the CORIM CMMS

PROJECTS

Talos · personal robotic assistant, 2026 – present
Modular architecture, 8-phase roadmap, Denavit–Hartenberg kinematic model of a 6-DOF arm (Hiwonder xArm 1S) used for forward and inverse kinematics in the control software.

Traffic light controller · university project, 2025
GRAFCET implemented in CircuitPython on a Raspberry Pi Pico and in CODESYS (LD, ST, SFC); pedestrian priority, day/night modes, OLED menu, fault detection.

Handheld game console · university project, 2024-2025
PCB designed in Proteus, etched and soldered, 3D-printed case, 3 games in CircuitPython.

Acheron: Echoes of the Deep · in progress
Two-player VR escape game, team of 4 (Unity 6, Meta Quest 3).

EDUCATION

BUT GEII — Bachelor of Technology in Electrical Engineering & Industrial Computing · 2024 – 2027
Automation track, work-study since 2025 · IUT de Rennes

BUT Computer Science, 1st year · 2023 – 2024
IUT de Lannion

French Baccalaureate with honours (mention Bien) · 2023
Mathematics, Computer Science · Lycée Saint-Joseph, Lamballe
